

FRESNELSPOT

**Multiblitz**<sup>®</sup>

**PROFRE I RASTU**

P-bayonet    V-bayonet  
lens Ø 15 cm    lens Ø 20 cm

**Characteristics:**

The build-in iris diaphragm allows the diameter of the light beam to be narrowed progressively to a very tight circle of light. The fresnel-spot ensures an optimum lighting of leather and textiles. Intended for universal use in portraiture and product photography, it also works great as a directional main-light.
