

LIGHTBALL

Codes:

PROGLOB | RIGLOB, Ø 50 cm

P-bayonet

V-bayonet

Characteristics:

With a light distribution of 360°, the "Lightball" is perfectly suited for illumination of interiors and daylight simulation. But it is a great light shaping tool for portraiture work also: It provides a "bare bulb" effect but due to the large diameter it is much more diffuse and soft, creating a very balanced light with soft shadows. Further applications are background- and instant location lighting. Installed high up on a lightstand it can give a "street lamp" effect.
