

RIGID AREA LIGHT

Codes:

COMMUL-1 | RIMUL-51

P-bayonet

V-bayonet

Characteristics:

This rigid reflector produces a soft, diffused light with low lighting contrast. Shadows are quite weak and with blurred edges. The distribution of brightness over the total object plane is extremely uniform, ideal for reflections in shiny objects. With a honeycomb filter (COMWAL-1) attached the illumination is somewhat softer and the shadows are slightly darker and sharper. Barn doors (MULSAB-51) for stylish lighting accents are another optional accessory.
